

## Fork Positioner for Forklifts

Forklift Fork Positioner - A fork positioner is a tool made out of high quality materials meant to be able to withstand the most challenging procedures and work environments. This piece of equipment could enable drivers to be able to work the forks hydraulically without leaving the seat. Side shifting units have the added ability to be able to laterally position the arms or the entire load so as to facilitate more accurate lifting and position in a quicker and more effective way.

The unique blade pocket design could enable the one operating it to safely sway the unit's forks without any fear of damaging the positioning cylinders. This can allow the operator the option to either execute simultaneous or independent fork movement, dependent upon the job requirement. For most lift trucks with non-OEM carriages, complete carriages are required. Standard OEM carriages can be converted into fork positioners on existing units.
